Phillip Marais

Front-End-Focused Full-Stack Developer · Angular · TypeScript · .NET

Somerset West, Western Cape, South Africa · Phillipmar27@gmail.com · +27 79 489 8533 · github.com/PhillipMarais · linkedin.com/in/phillip-m-92b2a7136

SUMMARY

Front-end-led full-stack developer with 4+ years of commercial experience building customer-facing Angular, Ionic and .NET (C#) applications in the telecommunications and automotive industries. Rewrote a lead management system from AngularJS to Angular 19 and a stock management module from Angular 11 to 19, and built interactive Highcharts dashboards and a tablet document-signing solution. Worked across most of the CMS Systems platform, which has over 71,000 users. Now consolidating several mobile apps into one. Experience in fully remote and hybrid Scrum teams. Based in South Africa (UTC+2), which overlaps fully with UK and European working hours. Open to fully remote roles.

TECHNICAL SKILLS

- **Front-end:** Angular (11 to 19), TypeScript, PrimeNG, Highcharts, Syncfusion, Ionic, AngularJS, JavaScript, HTML, CSS
- **Back-end:** C# and .NET Core, REST APIs, Entity Framework, SQL Server (stored procedures, schema changes)
- **Cloud and integrations:** AWS Lambda, S3 (AWS SDK, pre-signed URLs), SNS, SQS, SMS and email integrations, third-party API payloads
- **Tools and process:** Git, SourceTree, Bitbucket (repositories and pipelines), Jira, Agile and Scrum, deployments
- **Also familiar with:** Java

WORK EXPERIENCE

Software Developer, CMS Systems (automotive)

Sep 2023 to present · Hybrid

- **Lead management system rewrite:** Rewrote the front end of a legacy lead management system from AngularJS 1.8.2 to Angular 19. Designed and built it independently over 4 months with TypeScript, PrimeNG and REST APIs.
- **Stock management modernisation:** Rewrote the stock management front end from Angular 11 to Angular 19, upgrading page by page and fixing breakages from older technologies. Built vehicle inventory tables, filtering, dealership-specific views, stock-scanning data handling and chart-based stock visualisation.
- **Dashboards:** Built interactive Highcharts dashboards with data tables, pagination and drill-down, including lead analytics, OEM and workshop dashboards. Improved performance with lazy loading and by splitting drill-down views, working with a colleague on the front and back end.
- **Digital document signing:** Built a tablet-based signing solution for an automotive workshop system using Syncfusion. Signed documents are stored in AWS S3, and payloads are sent to Evolve for job-card and invoice generation, tied into existing workshop workflows.
- **AWS and security:** Made all S3 buckets private for one of the company's largest apps and moved file retrieval to the AWS SDK with pre-signed URLs. Developed Lambda functions for SMS, SQS-driven email and third-party payloads triggered by user actions, and used SNS to notify third parties when prospects are updated. Handled permissions work.
- **Platform work:** Migrated the web app to UTC time handling. Responsible for moving the company's mobile apps into one Angular and Ionic app. Run the workshop module and the pre-inspection app.
- **Full-stack and database:** Develop and maintain C#, .NET and SQL Server back ends using Entity Framework and stored procedures, adding tables and queries and troubleshooting application, API and database issues.

- **Delivery:** Deploy projects (via RDP and S3) and work in Jira and Scrum, taking tickets across the system as workload requires, mostly for the lead management system and the workshop module. Help colleagues on their projects.

Software Engineer, WIM Technologies (telecommunications)

May 2022 to Sep 2023 · Fully remote

- Delivered front-end and back-end work with HTML, CSS, JavaScript and .NET Core as part of a remote Scrum team.
- Built a scheduled AWS Lambda job that populates daily statistics for a KPI module.
- Delivered extensive UI improvements to a Google Maps project, improving usability and functionality.
- Optimised SQL queries and database interactions to improve efficiency.
- Worked closely with a graphic designer on UI enhancements, and with other developers on larger projects.
- Managed code with Git through SourceTree.

EDUCATION

- **BSc Computer Science**, Stellenbosch University, 2018 to 2022. Rugby bursary.
- **Upington High School**, 2012 to 2017. Selected as one of the district's top leaders for the Trailblazer Camp (June 2017).
